- Detection performance: Accurate temperature detection by sensitive sensor
- Designed in accordance with EN54-5 standard

System Overview

DHI-HY-1310 Addressable Heat Detector is a mated product of the Addressable Fire Alarm Control Panel. Integrated with non-polarity two wire and temperature sensor, this detector analyzes ambient temperature by intelligent algorithm to trigger alarms. When the temperature has reached the alarm threshold, the Addressable Fire Alarm Control Panel will confirm a fire alarm according to the received message sent from the detector, and the detector indicator will light simultaneously to indicate alarm.

Functions

Fast response

When the temperature reaches the alarm threshold, the detector reports fire alarm within 1 second.

Fire detection

When the temperature reaches differential or constant alarm threshold, temperature alarm is triggered, suitable for different situation.

Scene

It is suitable for such industrial and civil buildings that have a great deal of heat when fire takes place, such as kitchens, boiler rooms, generator rooms, drying workshops and smoking rooms and it is not suitable for places with a great deal of smoke but little heat.
